Environmental and
Engineering Excellence
from Concept to Completion

Whitman President Barry Skoultchi Presents at Metalcon 2011 Conference

Whitman CEO and President Barry Skoultchi, P.E. recently attended Metalcon International's 21st Annual Conference and Exhibition for the Metal Construction Industry held in Atlanta, Georgia. Teaming with John Drexinger of Pro-Tech Energy Solutions during one of the conference's instructive sessions, Skoultchi delivered a presentation entitled "Developing a Solar System on a Metal Roof - From Concept to Successful Completion".

The presentation traced a potential solar installation on a metal roof from its very beginning to the successful completion of the project. Skoultchi covered how to conduct a feasibility study for developing comprehensive structural and electrical design, as well as financing options. Details including existing electrical service and equipment, utility transformers, structural components such as wall studs, roof purlins, columns and metal panel spacing were covered. Skoultchi demonstrated how the engineering team uses this information to evaluate the feasibility and optimum design of the project and to develop the construction drawing package for permit application.
