

Positions Available at WHITMAN

Senior Environmental Engineer (Remediation Systems)

10+ years hands on experience in remediation systems design and O&M experience on SVE/GWTS. Capable of preparing design reports including equipment specifications and cost evaluations, and provide construction oversight for implementation of all aspects of site remediation including systems. Strong analytical skills, the ability to clearly write, give verbal presentations, and articulate new approaches through written proposals is a must. Business development experience would be a plus.

Project Manager/LSRP

Due to our company's recent growth, we are looking for an environmental Project Manager/LSRP with at least 7-10 years experience in environmental consulting or similar employment. The candidate must have been in charge of investigation, remediation, design and/or compliance projects of significant complexity, supervising staff and contractors; must have had direct line supervisory and management responsibility for staff; and must have had substantial interaction with clients and regulatory agencies. The ability to clearly write, give verbal presentations, and articulate new approaches through written proposals is a must. Business development experience would be a plus.

Environmental Scientist/Engineer/Geologist

3-5 years hands on experience conducting environmental due diligence investigations including Phase I/II Environmental Site Assessments, ISRA-related Preliminary Assessments, and similar projects. Familiarity with NJ Technical Requirements for site remediation, ISRA, and ground water sampling procedures is a major plus. Candidate should be OSHA 40 hour trained and be able to spend approximately 30% of his/her time performing field work such as soil and ground water sampling.

Structural Engineer

Whitman is seeking a Structural Engineer with 3-5 years experience in design of steel, concrete, masonry and timber structures for applications including building analysis/design and telecom installations. B.S. Degree in Engineering is required; E.I.T. certification is preferred. Position will require a working knowledge of ASCE 7 and IBC 2009. Qualified candidates will have computer application experience including RAM Structural System, RAM Element and AutoCAD.

Asbestos Safety Technician

Valid New Jersey Asbestos Safety Technician (AST) license required. Minimum of 2 years of experience performing building surveys and monitoring asbestos abatements at publicly and privately owned facilities. Experience in supervising asbestos abatement contractors is necessary, and experience in preparing reports a plus.

Environmental Scientist/Engineer/Geologist (Due Diligence)

2-4 years hands on experience conducting environmental due diligence investigations including Phase I/II Environmental Site Assessments, ISRA-related Preliminary Assessments, and similar projects. Familiarity with NJ Technical Requirements for site remediation, ISRA, and ground water sampling procedures is a major plus.

Candidate should be OSHA 40 hour trained and be able to spend approximately 30% of his/her time performing field work such as soil and ground water sampling.

Environmental Technician

3-6 years of hands-on experience in the construction, operation and maintenance of remediation systems including ground water pump and treat, soil vapor extraction and air sparging. Must also be able to perform ground water monitoring and soil sample collection. NJDEP wastewater treatment system N-2 license a plus.
