**Whitman Project Manager Kevin Lovely Assisted Jersey City Public Schools in Judging Middle School Science Fair**

By Betsy Kraat

EAST BRUNSWICK, NJ--Whitman has announced that Kevin Lovely, project manager, assisted the Jersey City Public Schools District in judging its annual middle school science fair.

Students from grades 5 through 8 exhibited their science fair projects on Friday, Jan. 8, at the New Jersey National Guard Armory, located at 678 Montgomery St., in Jersey City.

Lovely has been at Whitman since 2007, responsible for contract development, working with regulatory agencies and acting as a liaison between the firm's clients and the occupants of their buildings, as well providing project implementation and management relating to all facets of indoor environmental projects, including indoor air quality, asbestos, environmental health and safety and lead abatement.

"It's an honor to be asked to help judge the Jersey City Public Schools science fair, and I greatly looked forward to seeing what scientific experiments the students had conducted," Lovely said. "I have been able to work extensively with some of New Jersey's public schools on various inspection and management projects, and it is an interesting extension of that work to see how the students took what they learned in science class and used it to determine the scope of their individual projects."

Lovely has more than 20 years of experience in the environmental health and safety field, developing, designing and managing projects throughout the United States relating to issues of asbestos, lead-based paint and indoor air quality. Lovely earned his credentials through the United States Navy environmental education program.
