

Whitman Expands East Brunswick Headquarters for Brownworth Engineering Division

More than 20 Employees Will Move into Newly Expanded Office Space

EAST BRUNSWICK, N.J. – Whitman, New Jersey’s leading environmental, engineering and management firm, has announced that the staff of Brownworth Engineering will relocate to Whitman’s main office in East Brunswick as of May 30. Whitman acquired Brownworth in 2007, creating one of the state’s leading full-service engineering firms.

“Over the past seven months, we have been working to ensure that all facets of our team are working together to the benefit of our clients,” Whitman President Barry Skoultchi said. “Having everyone under one roof, able to collaborate and share resources, will certainly help with that endeavor.”

Whitman expanded its current office by 4,000 square feet to accommodate the new employees, bringing the total office space to 18,000 square feet. Two dozen Brownworth employees will be making the move from their former office in Piscataway, bringing a total of 70 employees to Whitman’s headquarters.

“With the acquisition of Brownworth, we knew that we were poised to become a market leader in all areas of mechanical and electrical engineering while still retaining our roots as environmental experts and consultants,” Skoultchi said. “We have already seen the benefits of having these specialties working together, advising our clients through every step of the development process. Now we have the added bonus of being located in the same office and becoming a literal one-stop shop for environmental, civil and structural engineering and now mechanical and electrical engineering services as well.”

Founded in 1985, Whitman has emerged as New Jersey’s leading environmental engineering firm, offering expertise in a variety of specialties, including site assessment, brownfield redevelopment and innovative remediation technologies. Combined with Brownworth’s history of stellar design work, consistently furnishing clients with ideas and solutions that bring creative and practical insight to complex mechanical and electrical engineering problems, the company has emerged as one of New Jersey’s leading engineering firms.

“The combined efforts of these firms provides full service and added value to all of our clients,” Brownworth Principal Frederick Missel said. “The synergy and resources for all employees at the East Brunswick office is a win-win relationship. We remain committed to our core values of delivering customer satisfaction and staying on the cutting edge of technology.”

Whitman

Whitman is New Jersey’s leading environmental, engineering and management firm, offering expertise in brownfield redevelopment, civil and geotechnical engineering, site assessment, remediation cost recovery, groundwater contamination and recovery, indoor air quality solutions, industrial hygiene and innovative remediation technologies. Since its founding in 1985, the East Brunswick based company has performed over 2,500 site assessments, remedial investigations and remediation designs for all types of development and redevelopment projects, including commercial, retail and residential properties in more than 12 states. Whitman has secured over \$30 million in state and federal reimbursements for environmental work for their clients.

In 2007, Whitman acquired Brownworth Engineering, a mechanical, electrical and plumbing engineering firm located in Piscataway, N.J. The acquisition has created one of the largest full-service firms in the state, providing expertise in all areas of environmental and engineering services.
