

Beneficial Use & Recycling Services

Overview

As the world strives to become more sustainable, companies are looking for ways to minimize waste or divert waste material away from traditional disposal methods.

To solve these needs, Whitman has established several services to evaluate certain waste streams as candidates for other uses. Whitman's Environmental Division has over 30 years of experience in designing and implementing environmental solutions tailored to regulatory requirements and client priorities.

Your waste may have value being used somewhere else. Contact Whitman to review your waste materials to determine if there are other beneficial uses. As an added benefit, many beneficial use type programs provide savings when compared to traditional disposal methods.

Non-Hazardous Bulk Solids

Types of Materials

- Soil
- Silica Solids
- Ceramics
- Gypsum
- Production Based Dusts
- Processed Filter Cakes

Beneficial Uses

- Road Based Products
- Landfill Cover
- Raw Material Replacements
- Fill Products

Organic Materials

Types of Materials

- Bulk Foods (Compactor/ Roll-Off Containers/Tankers/ Totes/Drums/Pails)
- Consumer Packaged Foods (Palletized/Gaylord Boxes)
- Processed Filter Cakes

Beneficial Uses

- Feed Program
- Compost Program
- Digestion Program

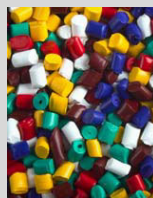

Post-Industrial Plastics

Acceptable Materials

- Polystyrene
- Polypropylene
- Polyethylene (HDPE & LDPE)
- PET & PVC

Acceptable Material Forms

- Powders
- Pellets
- Lumps
- Chunks
- Rolls
- Trimming

Recycling Processes

- Grinding
- Shredding
- Washing
- Blending with Domestic & International Sale

Materials can be managed via Bulk Truck, Van Shipment, and Dropped Trailers
