

Site/Civil Engineering Services

Developers and property owners turn to Whitman's professionals for more than just our environmental services.

From grading plans and stormwater controls, to soil erosion and sediment control plans, Whitman can lead in the preparation of any site plan. Our team has the expertise and knowledge to aide any project in gaining municipal, county and state approvals. Our licensed professional engineers have successfully testified before numerous local planning and zoning boards.

One of the keys to our success is communication. Whitman's professionals work closely with the project team and various governmental agencies to guide projects through the complexities of the approval process. On the other side of the spectrum, we use one contact person for each project to ensure that our responsiveness to the client's needs and the lines of communication remain open.

Whitman's Site/Civil Engineering projects serve a wide variety of industry sectors, including, but not limited to:

- ✓ Commercial Retail
- ✓ Industrial
- ✓ Schools
- ✓ Recreational Facilities
- ✓ Residential (Single Family & Multifamily)

Our Services

Once a property is deemed clean and a site becomes a viable land development project, Whitman recognizes that providing Civil Engineering Services to our clients, from feasibility studies through final site plan approvals, is the next logical step in the development process.

Whitman's Site/Civil Engineering Team can provide:

- Property Condition Assessments
- Feasibility Studies/Concept Plans
- Site Plan Preparation & Specifications
- Soil Erosion & Sediment Control Plans
- Stormwater Management
- Regulatory Permitting & Approvals
- Expert Testimony
- Construction Administration & Program Management

We pride ourselves on our ability to develop innovative, practical solutions and to coordinate the environmental conditions and site development.
